Change How You Bunker New Portable Level Gauge with Wireless Remote Indication Released

Musasino Co., Ltd. has announced the commercial launch of the Level Cera Portable wireless level gauge. The new gauge features wireless remote indication of tank levels, and is aimed at increasing the safety and accuracy of bunkering aboard dry cargo ships.

Recognizing the needs of owners and operators for tools to enhance safety and efficiency in their bunkering operations, Musasino embarked on development of an easy-to-use, portable device. Recent increases in the price of fuel, as well as the reports of problems with air-infused fuel make such a tool even more important.

Level Cera Portable also allows crews to be more productive because the gauge requires much less labor than sounding tapes. The gauge is also less influenced by the weather, the skill or experience of the crew, or air bubbles or foaming in the fuel. In addition, the gauge automatically corrects for specific gravity to provide accurate level readings in real time.

Sounding tapes, which are still commonly used for bunkering operations, require a great deal of time and labor, since measurements must be repeatedly taken before, during and after bunkering. The continuous monitoring provided by this gauge, however, helps prevent costly and dangerous overflows, while reducing the labor and time required.

Information on Level Cera Portable can be found on Musasino's website or from their sales department.

Musasino has been making marine tank monitoring equipment and systems for over 50 years. Their in-house development, design, sales and production teams work closely with customers and partners to provide systems and equipment that meet the ever-changing needs of the global marine industry.
