

Join Musasino at Marintec China 2011, booth 5C21-11!

Musasino is inviting everyone to visit their booth at Marintec China 2011, November 29 through December 2 in Shanghai.

At this year's exhibition, Musasino will be showcasing their complete line of tank monitoring and control systems. Musasino has tapped their long experience in development and design of marine tank monitoring systems to provide complete, customizable and scalable solutions for tank monitoring on almost any type of ship.

Of special note at Marintec China 2011 will be the Level Master – 11 System for tankers. Centered on Musasino's radar type cargo tank level gauge, the system provides accuracy and reliability in support of safe cargo operations for chemical, product and oil tankers. The modular base of the system allows Musasino to provide solutions to meet the specific requirements of your vessel and project.

Musasino's newest product, a portable level gauge featuring wireless remote indication for bunker tanks will make its exhibition debut in Shanghai. Level Cera Portable was designed to provide accurate bunker tank level readings that are unaffected by air-infused or foaming fuels. This simple to use gauge has the potential to save operators thousands of dollars and avoid problems with incorrect level readings caused by so-called cappuccino bunkers. The wireless remote indication also frees up the crew for more productive assignments.

While visiting Marintec China this year, please stop by Musasino's booth 5C21-11 in the Japan Pavilion to learn how Musasino's products and systems can work for you.
